| yashyogeshpatil2203@gmail.com

| Kalyan, Maharashtra, India – 421311

Education

Don Bosco Institute of Technology, Mumbai

2023 – 2027

B.E. – Information Technology

CGPA: 7.07 / 10

Universal College, Pune

2023

12th – MSBSHSE

Percentage: 61.50 / 100

GEI High School, Kalyan

2021

10th – MSBSHSE

Percentage: 77.80 / 100

Technical Skills

Languages: Python, JavaScript, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Django, Scikit-learn, OpenCV, NumPy, Pandas

Databases: MongoDB

Tools & Testing: Postman, Figma, Streamlit, Manual Testing, API Testing, bcrypt

Core Concepts: Machine Learning (Random Forest, SVM), Data Preprocessing, REST APIs

Internship Experience

QA Engineer Intern – The Lonely Bag

08 Oct 2026 – 23 Nov 2026

Key Skills: Bug Reporting, Manual Testing, Figma, API Testing, Postman, Test Case Execution

- Performed manual testing of web applications to ensure software quality and functionality; executed and documented test cases.
- Identified and reported bugs, collaborating closely with developers to verify fixes and improve reliability.
- Used Figma to interpret UI/UX requirements and Postman to test and validate REST APIs.
- Contributed to improving application usability, reliability, and overall user experience through structured QA processes.

Projects

Movie Ticket Booking Platform

React.js, Node.js, Express.js, MongoDB, HTML, CSS, JavaScript

- Developed a React-based movie ticket booking platform with user authentication, dynamic seat selection, and real-time booking confirmation, backed by Node.js, Express.js, and MongoDB.
- Integrated MongoDB for managing users, movies, theaters, and bookings with optimized queries; implemented secure payment integration and bcrypt password encryption.
- Designed a user-friendly UI with advanced search, movie categorization, and showtime filtering.

Counterfeit Currency Detection System

Python, OpenCV, NumPy, Machine Learning, Streamlit

- Built a Python-based counterfeit currency detection system using OpenCV, NumPy, and ML libraries; implemented image preprocessing (grayscale conversion, edge detection, feature extraction) to enhance accuracy.
- Trained and evaluated classification models (SVM / Random Forest / Deep Learning) to distinguish genuine from counterfeit notes, with a user-friendly interface for image upload and instant verification.

Awetestic – AI-Based Autism Spectrum Disorder (ASD) Screening System

Python, Django, React.js, JavaScript, Scikit-learn, Random Forest, Pandas

- Developed an AI-powered web application for early ASD screening using behavioral questionnaire analysis; integrated a Random Forest model with Scikit-learn to predict ASD risk from user responses.
- Built a responsive React frontend with a Python Django backend for real-time prediction, featuring an interactive dashboard with risk scores and AI-generated summaries.
- Optimized the system for scalability and accessibility for parents, educators, and healthcare awareness programs.

Positions of Responsibility

Finance Head – Maths Domain, Don Bosco College

2025 – 2026

- Managed budgeting, expense tracking, and financial planning for events and activities; ensured proper allocation of funds and maintained transparent financial records.

Design Team Head – IT Department, Don Bosco College

2025 – 2026

- Led the design team in creating posters, event banners, and digital media, ensuring consistent branding for all official communication.

Social Media Head – SIE Club (Social Innovation for Environment), DBIT

2025 – 2026

- Handled official social media accounts and designed engaging content to promote initiatives, events, and increase student participation.
